REMOTE DESKTOP SERVICES

For many organizations today, an office is not just a single brick-and-mortar location anymore. With distributed workforces, remote contractors, interns, and more, the "workplace" is more expansive than ever, which requires a scalable, globally-usable approach to your staff's user experience.

SERVER COLOCATION

Centralized infrastructure requires power, maintenance, and 24/7 physical protection. Our colocation solutions feature onsite 24/7 security, air conditioned data center rackspace and cabinets, onsite technical support, and much more.

MANAGED IT SERVICES

TECHNOLOGY DESIGN

From office, to industrial, to retail, to medical, our technology vision becomes your landscape for business success.

TECHNOLOGY IMPLEMENTATION

From tight timelines to multi-year deployments, our level of focus to detail and commitment to doing precisely what we say we will do becomes the stable backbone of your commitments to others.

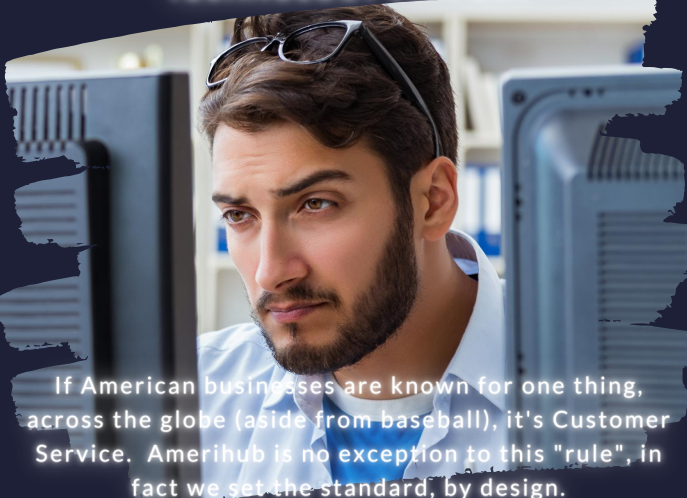

VOICE COMMUNICATIONS

From multi-site call centers, to multi-floor offices, to retail locations, to distributed workforces, we sell, configure, install, and enable premium voice and fax communications for businesses across multiple geographic areas.

TECHNOLOGY AUTOMATION

From automating repetitive customer service and technical support emails, to data science integrations with public and private APIs (Application Programming Interfaces), to automating financial transactions, our custom scripting and programming helps to make businesses responsive, profitable, and to keep them safe.

TECHNOLOGY SUPPORT

If American businesses are known for one thing, across the globe (aside from baseball), it's Customer Service. Amerihub is no exception to this "rule", in fact we set the standard, by design.
